FlowMatrix for eCopy

Sharescan connectors **for automating** document capture

records capture • content capture • contact management • accounts • digital mail room • mobile working • cloud

flowmatrix

The fast track solution for **departmental** capture

FlowMatrix eCopy Sharescan connectors are available for nearly all brands of MFD and leading network scanners. Most manufacturers now host comprehensive development platforms within the device to maximise the richness of the user experience which is fully utilised when integrating with eCopy. The eCopy Sharescan connector supports an industry leading set of tools including batch processing, comprehensive metadata profiling, image preview and multi-language support. Paper River have developed connectors for over twenty five different systems for private and public sector organisations.

Nuance eCopy Sharescan connectors provide a universal experience on multiple branded MFD fleets and network scanners

Options

- Embedded or external eCopy options supported
- Supports Canon, Ricoh, Xerox, HP, Konica Minolta
- Connector options for Canon network scanners.

Content & EDRMS

HP Meridio

- Fast and convenient way to scan documents into Meridio from any supported MFD.
- Logon-based access for security around access and maintaining audit trail.
- Permission based browsing of File Plan, Workspaces & Users and Groups within the Neighbourhood.
- Manage your list of favourite scan destinations for faster selection.

FlowMatrix eCopy QuickDrop

- Scan to User, Group or Another User Queue
- Use Proximity/Swipe to Authenticate
- Profile Document Back at Desktop
- Simple One-Click MFD Submission
- Available for Most MFD Brands
- Connectors Available for Network Scanners

Business Processes Automated

FlowMatrix Life-Cycle Solutions with eCopy

FlowMatrix allows companies and organisations to optimise the management of information through efficient, secure and audited business process automation. FlowMatrix connects MFP devices, mailroom scanners, client desktops and core business applications through a highly powerful rules-based delivery engine and client.

We have developed solutions with many eCopy interfaces that allow full output and input automation for true document-lifecycle management. These include a workflow output manager, digital mail room solution, invoice processing solution which have all been developed in-house. We have also developed several tablet applications for remote workers allowing full off-line and on-line data acquisition with submission to office or Cloud based applications.

Invoice Processing via eCopy

Our invoice processing solution is one of the most cost-effective and yet comprehensive applications available in the market today. It allows true collaborative processing between all users to share any exception handling and can input virtually all paper and electronic invoice submissions formats. The solution can be hosted in-house, in the cloud or from a bureau and procured on a per click, monthly subscription or capital expenditure basis to suit any financial budget. The return on investment of the solution can almost be instantaneous. We have also developed a Sharescan eCopy interface for quick one-click financial document type submission for department or remote client deployment.

By investing in an automated invoice processing solution savings will continue to increase as the system learns and suppliers are helped to be more effective in their submissions

Remote Capture

The FlowMatrix Remote Tablet Application provides a wireless information acquisition and submission solution for field workers. Using just a tablet or smart phone in conjunction with a wireless scanner users can in a few simple steps capture and submit high quality images into line-of-business applications. There is no need to be connected to an office network. Users can also submit a scan back at the office through a simple walk-up MFD synchronisation in just one click with profiling from their mobile device.

In addition users can also capture and send photos from their smart device – ideal for site based information gathering. The innovative connector has been developed for Apple, Android and Windows tablets and smart phone devices allowing documents to be captured without delay, straight back into office-based workflows or into the Cloud

FlowMatrix for eCopy supports many Cloud applications including Google Drive, OneDrive, Salesforce.com, Dropbox and SharePoint including remote table application solutions

Mail Room eCopy Interface

The application has been designed as a two-tier solution so that mailroom users can easily share the workload by switching roles very easily with full process audit from point of capture through to delivery into electronic content or EDRMS. The first tier is rapid click touchscreen eCopy interface that has pre-categorisation buttons for batch submission of all document types. The second tier is a full y fledged mail room application. In addition final decision making for documents and indexing can be deferred to a remote department or user using their own QuickDrop desktop client connected to the same

Key Features

- eCopy Touch Screen Batch Import and QA Station
- Comprehensive QuickDrop MailRoom Client with Advanced Workflow
- Self-Service Automation Templating for Document Types
- OCR, Indexing, Categorisation, Redaction, Forms and Auto-indexing

Cloud Connectors

Cloud Pack

Dropbox

Microsoft OneDrive

Google Drive

- Our combined one price Cloud pack connector for all three Cloud systems.
- Integrates with industry standard authentication mechanisms for security.
- Browse destinations and folders within Google Drive, OneDrive and DropBox
- Manage your list of favourite folders for scanning for faster folder selection.
- Dedicated website and admin tools for easy user set up.
- Optional conversion to Google Docs native format automatically on upload.

CRM Connectors

Sage Act

- Fast and convenient way to scan documents into Sage ACT! from any supported MFD.
- Simple search for Customer or Supplier record for the scan destination.
- Option to add Sage ACT! activities, like meeting or call, linked to the document directly from the MFD.
- Log-in based security for access control and ensure that users can only see permitted records.
- Creates text-searchable PDFs automatically as part of scan process
- Simple and intuitive user interface means that almost no training is required.

Salesforce.com

- Easy and convenient way to scan documents directly into Salesforce.com from any supported MFD.
- Logon-based security combined with Salesforce authentication protocols for access control.
- All three document storage destination types supported: Attachments, Documents and Files..
- Simple browse or search for desired record or location for the scanned document.
- Support for adding keywords and tags to document at the MFD for improved search retrieval.
- Admin options to customise aspects of the user experience.

ERP Connectors

Sage Line 50

- Easy and convenient way to directly scan documents into Sage Accounts 50.
- Login-based security for access control and to maintain audit trail.
- On-screen search for Customer or Supplier at the MFD.
- Scan and store document against customer, or supplier record.
- Reduces the need to store paper documents.
- Intuitive user experience requires almost no user training.

Local Government

Civica

- Scan documents from any supported MFD directly and rapidly into a Civica W2 worktray.
- Familiar and easy user experience – works in the same way as the Civica batch scanning tool.
- Dynamic integration with user accounts ensures only the allowed indexing trays are displayed.
- Rapid filtering of index trays on reference types and document types.
- Controlled and audited access to scanning capability.
- Knowledge worker can scan a working document into Civica W2 without having to send for scanning.

Northgate Information@Work

- Scan a batch of documents from supported MFD in just a few clicks into Information@Work.
- Logon controls user access for security and for audit trail.
- The user can only select a filing system for which they have permissions.
- The process is as per standard batch scanning – document arriving in the batching stage of I@W.
- Information workers can rapidly scan into I@W without having to send them away for scanning.
- Easy and intuitive: requires almost no training.

- Easy way to scan documents directly into R/KYV from any supported MFD in your organisation.
- Supports multiple R/KYV databases.
- Option to select a workflow to start automatically upon upload of the document.
- Authentication provides audit trail around scanning activities and controls access.
- Manage your list of favourite scan folders at the MFD for faster folder selection.
- Login-based access control ensures restricts permissable folder access.

Legal Connectors

Rimage

- Solution to enable Rimage Bible creation for legal.
- Integrates with industry standard authentication mechanisms for security.
- Browse destinations and folders and add new paper matters files.
- Trigger creation of a Bible to media.
- Simple solution with no training needed.
- Great solution for archiving legacy paper matter files.

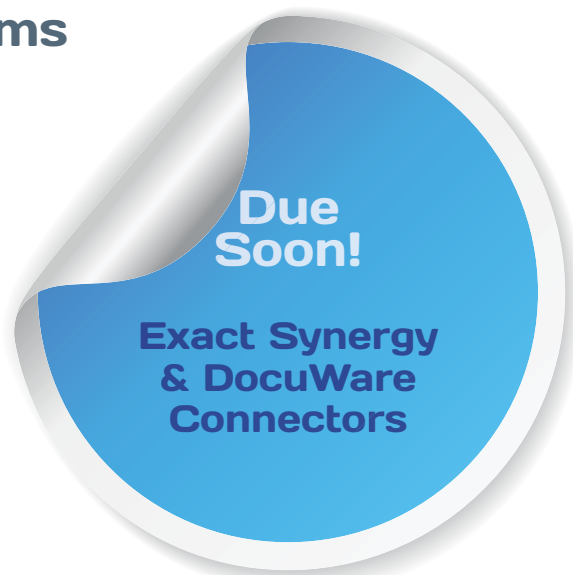

Paper River supports Nuance eCopy capture for over **twenty five** systems

We have built Sharescan connectors for over 25 different systems and are the most prolific developer of eCopy for Nuance worldwide. Many of our connectors are now also OEM'ed by Nuance.

Need a **New Connector** built?

If you are a device manufacturer, solutions integrator, application vendor, channel reseller or simply an end user we can develop new connectors to your requirement typically within 4 weeks. Sometimes we can develop the product for free if there is a tenable market for the solution going forward. Just call us!

About our business

we pride ourselves

Paper River is a leading UK developer of information capture and processing tools. We have a full suite of in-house tools for Forms Processing, Invoice Processing, Digital Mail Room and Correspondence Routing all built around a rules based processing engine. Our products are designed to automate the capture and processing of information by extracting and using the intelligence within a document. Built around a system of user, group and document work queues, users can easily and simply make decisions if needed by using fully collaborative desktop interfaces. Our solutions save time and reduce costs almost immediately.

We also develop other solutions

Business Process Automation

Full automation of unique client information processes

Contact Centre Processing

Minimum click capture, audit and receipting for one-stop shops

Distributed Capture

Capture by MFDs & network scanners into electronic content

Digital Mail Room

Capture, categorisation, batch process and workflow

EDRMS Migration & Legacy Archive Capture

Migration between content systems and paper archive digitisation

Invoice Processing

Comprehensive automation with line item, approval and goods receipting.

Planning Processing

Fast planning application capture with publishing, archive and redaction – including plans.

Remote Mobile Capture

Remote wireless capture of documents and images for mobile workers.

Secure and Controlled Printing

Pull printing, print room, information firewall and cost management

Web & Forms Capture

Production of web, smart phone, tablet and paper forms.
